

Meeting with Blake 11/26
Attendees: Blake, Nick, Cole

deliverables schedule:

- need dates/week numbers
- gantt chart/something visual (excel template)

srs:

- revision history:
 - one box per version number, include all names, date of final change, etc.
- 1.3 purpose:
 - only place that has names, everywhere else in document shouldn't call people out by name, just their roles
- 1.4 conventions:
 - remove unnecessary language
- 1.5 Audience:
 - who will look at this stuff later (future chairs likely won't look at srs, instead will look at user guide)
 - project maintainers will look at srs later
- 4 System Features:
 - indicate that we'll interact with banner using an interface
 - remove security from here, we're not writing our own – talk about it later in section 5
- 5 other reqs:
 - remove safety (if it isn't needed, don't put it in the document)
 - remove quality attributes
 - talk more about what security we will use (atus?) and/or what it will do
- **embed everything (including deliverables schedule and wireframe) inside of srs**

wireframe:

- how the screen is supposed to look
- one image per different "view" (home page, results page, etc)

when finished: new email chain w/ Blake for resubmitting the SRS with the wireframe and schedule embedded in the document
